

Accounts Payable Automation - Case Study

McGuires

McGuires

Company Profile

McGuire's Hotels are the largest family owned chain of hotels in Queensland. Family owned and family run, the McGuire's have been in the industry for four generations with venues all over Brisbane and the Gold Coast. They pride themselves on providing top quality service, meals, accommodation, retail stores and venues to their guests.

Challenges

Prior to implementation of Dataline's Invoice Automation Solution, McGuire's Hotels would manually key in data from around 2500 invoices every month. It soon became evident that a management decision needed to be made to overcome the challenge of time spent manually keying invoice data into their accounting system.

A decision was made to digitally transform their Accounts Payable processes.

Great Results

The shift of focus from data entry to analysis was a huge plus for the business. This massive undertaking was facilitated by the move to MYOB Advanced which was carried out by Dataline's partner, Exobiz who are experts in the implementation of MYOB Advanced.

Dataline's APA+ was a natural add-on choice solution as its highly regarded by Exobiz and now by McGuire's Hotels as well.

In this instance, Dataline also offered an invoice verification service where staff members review all invoices insuring the highest level of data accuracy achieved.

The data entry task that once took days is now a seamless process that integrates with MYOB Advanced.

"The streamlining of the invoices with Dataline's APA + have made it more time efficient, the invoices are easily accessible and an overall improved business process"
